SUMMARY

Computer Science Engineering student with hands-on experience in Linux administration, cloud computing, and containerized DevOps workflows. Skilled in building CI/CD pipelines, infrastructure automation, and observability solutions using Docker, Prometheus, Grafana, GitHub Actions, and AWS. AWS Cloud Practitioner certified with practical exposure to system administration, networking, monitoring, and reliability engineering principles.

EDUCATION

Sahyadri College of Engineering and Management

B.E. in Computer Science and Engineering (AI & ML) | CGPA: 8.43/10

Mahesh PU College

12th Standard (PCMB) | Percentage: 92.16%

Mangalore, Karnataka

Oct. 2023 – Present

Tumkur, Karnataka

Apr. 2021 – Apr. 2022

PROJECTS

CloudOps Observability Platform | GitHub

May 2026 – Jun 2026

Docker, Prometheus, Grafana, Loki, Alertmanager, AWS EC2

- Built a containerized observability stack for a Flask app using Prometheus, Grafana, Loki, Alertmanager, and Node Exporter via Docker Compose
- Deployed and monitored the complete observability stack on AWS EC2
- Wrote custom Prometheus alert rules and configured Alertmanager for critical-severity routing, validated through end-to-end failure testing
- Centralized logs using Loki and Promtail and built Grafana dashboards for application and system monitoring

DevOps Task Manager API with CI/CD Pipeline | GitHub

Jun 2026

Python, Flask, Docker, GitHub Actions, Docker Hub, Render, Pytest, Psutil

- Built a Flask REST API for task management with full CRUD operations, health-check, system-stats, and Prometheus-style metrics endpoints using Psutil
- Wrote 16 automated Pytest test cases covering CRUD operations, error handling, filtering logic, and monitoring endpoints
- Engineered a GitHub Actions CI/CD pipeline to install dependencies, run tests, validate builds, and trigger deployment on every push
- Containerized the application with Docker, published versioned images to Docker Hub, and automated production deployment to Render

Linux SRE Health Monitor | GitHub

Jun 2026

Linux, Bash, Cron, Slack Webhooks, Git, GitHub, GitHub Codespaces

- Built a Bash-based SRE health monitoring tool tracking CPU, RAM, disk usage, load average, network statistics, and running processes
- Automated HTML health report generation with cron-scheduled execution and configurable threshold-based alerting for CPU, memory, and disk utilization
- Integrated Slack webhook notifications to deliver real-time incident alerts on threshold breaches
- Developed and tested the solution in a Linux environment using GitHub Codespaces, with Git/GitHub version control

CERTIFICATIONS

AWS Cloud Practitioner Essentials | Amazon Web Services

May 2026

Linux Essentials Certification | Cisco Networking Academy (NDG)

Jun 2026

Networking Basics | Cisco Networking Academy

Jun 2026

Python (Basic) Skill Certification | HackerRank

Feb 2025

TECHNICAL SKILLS

Programming & Scripting: Python, Bash, JavaScript, Flask, Psutil

Containers & DevOps: Docker, Docker Compose, Docker Hub, CI/CD, GitHub Actions

Monitoring & Observability: Prometheus, Grafana, Loki, Promtail, Alertmanager

Cloud: AWS (EC2, S3, IAM)

Networking: TCP/IP, HTTP/HTTPS, DNS, DHCP, Ports

Operating Systems & Tools: Linux (Ubuntu), Git, GitHub, GitHub Codespaces, Cron, systemctl, top, ps, df

Testing: Pytest
